NASA students fly prototype of potential mars airplane

Called the Preliminary Research Aerodynamic Design to Land on Mars, or Prandtl-M, the small, remotely piloted glider aircraft flew August 11 at Armstrong Flight Research Center in Edwards, CA. It continues an effort that began last year with a group of students.

Civil Air Patrol summer encampments

Seventy Model Airplane and Remote Control Project (MARC) flight academy cadets participated in this year's summer encampments at the March Air Reserve Base in California and Oshkosh, WI. Each cadet was able to solo a Sensei RC trainer airplane. It all started with MARC in 2012, and in a small way is a tribute to all who have been a part in what we all have done, summer after summer.
